

Optimizing the time interval between API 653 internal inspections

At Vista Precision Solutions, we help storage tank operators significantly reduce inspection costs and out of service times for tanks, while increasing inspection intervals to optimize storage tank management and improve your bottom line.

Vista's Tank Assessment Program (VistaTAP) is a groundbreaking API 653-compliant method incorporating direct measurement tools to determine the internal inspection interval in API 653 during an in-service inspection. Using VistaTAP, an operator can extend inspection intervals by 7-10 years.

VistaTAP's advantages include:

Direct assessment of the tank without taking it out of service

Update Time to Next Inspection (TNI) - meeting API 653 requirements

Deferring costs of internal inspection

Eliminating hazardous waste disposal as inspections are done without emptying the tank

Contact Vista Precision today to learn how we can help solve your tank management challenges.
